

BW Manufacturing – July 2023

Date	Copy FB/LN/TW (280wc)	Copy Instagram	Creative
7/4	<p>Independence Day</p> <p>Happy 4th of July, everyone!</p> <p>At BW, we're proud to manufacture all our machines here in the U.S.A. This allows us to ensure quality and meet our customers' standards and needs.</p> <p>So enjoy the day everyone. Let us know your Independence Day plans in the comments!</p> <p>#BWManufacturing #madeinusa #4thofjuly #fourthofjuly #independenceday</p>	<p>Independence Day</p> <p>Happy 4th of July, everyone!</p> <p>At BW, we're proud to manufacture all our machines here in the U.S.A. Health and Safety

🚧 Safety comes first. 🚧

It's a top priority for operators at any job site, especially when it comes to containing dangerous silica dust.

That's why we created our high capacity vacuums. The B-202 and A-404 Pulse Vacs are designed for large amounts of dust containment with automatic filter pulsation and a high CFM.

Follow the link below to learn more about our dust containment systems!

Types of Surface Prep

Which surfacing method do you need?
What equipment will work best? 🤔

Every surface prep job is different, and as former operators, we know how important it is to use the right methods for the surface to last.

A scarifier uses spinning cutters to cut into the top layer of concrete, removing as much as a quarter inch at once. This is great for removing thicker layers of concrete, removing old coatings, and creating a level surface free from tripping hazards.

Learn more about concrete surface prep methods at the link below:

<https://www.bwmanufacturing.com/blog/surface-prep-vs-blasting-vs-grinding-concrete-surfaces/>

WHAT IS SCARIFYING?

A process that uses spinning metal blades on a machine to chip away at the top layer of a concrete surface, removing coatings and creating a level space.

7/13

Types of Surface Prep

For some jobs, cutting concrete just doesn't cut it. 🙅

That's where our next major method of surface prep comes into play - shot blasting. 💪

A shot blaster "shoots" a high-speed stream of abrasive material against concrete, wearing away at the surface.

Learn more about concrete surface prep methods and equipment here:

<https://www.bwmanufacturing.com/blog/shot-blasting-vs-scarifying-vs-grinding-concrete-surfaces/>

7/18

Types of Surface Prep

Last (but not least), some surfacing jobs require a polished finish. ✨

Diamond grinding is the method for the job.

Concrete grinders spin diamond-tipped discs across the surface, creating an even, textured surface. This is ideal for indoor spaces and removing coatings while maintaining as much surface material as possible.

Learn more about surface prep methods and machinery on our website:

A process that uses a machine with a diamond-tipped tool to remove a thin layer of concrete from the surface and **create a smooth, polished surface.**

7/21	<p>Product Feature - D-1800-FT4</p> <p>Scarifying, shot blasting, and diamond grinding - sometimes, you need several machines to get the job done.</p> <p>Most machines can just do one type of surface prep. This means bringing lots of equipment to the job site, switching them in and out, and ultimately, taking more time.</p> <p>But the D-1800-FT4 isn't like most machines. This multipurpose chassis makes it easy (and fast) for you to switch between surface prep tools with interchangeable attachments!</p> <p>Learn more about the machine designed by operators, for operators at the link below!</p> <p>https://www.bwmanufacturing.com/product/d-1800-ft4-chassis/</p> <p>#BWManufacturing #D1800FT4 #concreteprep #surfaceprep</p>	<p>Product Feature - D-1800-FT4</p> <p>Scarifying, shot blasting, and diamond grinding - sometimes, you need several machines to get the job done.</p> <p>Most machines can just do one type of surface prep. Education - Roughness

Before any surface prep work begins, it's all about concrete surface profiles.

Understanding the initial condition of the concrete allows us to determine what surface methods we'll need to get it from point A to point B, whether that's repairing, cleaning, coating, or a different texture.

THEN we can get to work with the right methods and equipment.

And that's where we can help. Let us know about your next surface prep job, and find your solution here:
